## Save us "Chemical Recycling" Man! Oh wait...you can't!

The petrochemical industries like to claim that chemical recycling will create "virgin-like" quality plastic. But beware - this isn't true! Don't ask me about the What if I told you, I can production process because you wouldn't handle this problem and we SOMEWHERE IN EUROPE. understand, but what I can tell you is that can keep producing and it produces an oil which can be ntroduced consuming plastics back into the system. as it is now? Fear not! WOWI So much plastic. That sounds incredible! I know just who to call! what can we do to "Chemical Recycling" Man! fix this problem?? How? Not quite... chemical What would help." CHLORINE recycling doesn't Wait...so the I Know! yield enough oil Err... oil you create DILUTION NITROGEN is enough to on its own... make new plastic? BROMME These are just some of the contaminants that make pyrolysis oil impure. It's Naptha! A little cocktail of Hey! crude oil and fossil fuel. This is why Chemical He's cheating! Recycling needs to be Umm... taken off speed dial, and what's that you're used as a last resort. drinking there? RETH!NK PLASTIC That will increase our reliance on the

petrochemical industries!
